

Association of Space Explorers

**SWF-ASE-ESA  
NEO Workshop - MPOG  
27-29 October 2010**

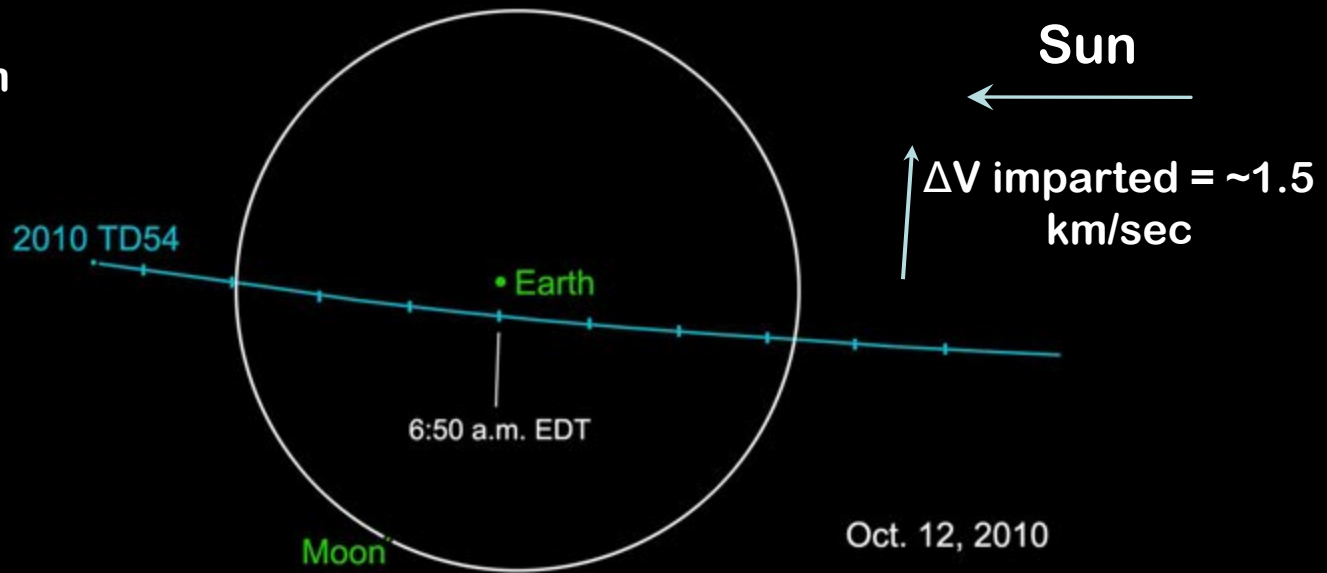

**Implementation of the MPOG  
(Mission Planning and Operations Group)**

**Rusty Schweickart  
ASE-NEO Committee**

# Association of Space Explorers

Dia = ~ 7 meter  
Vinf = 17.1 km/sec  
Min miss = ~ 45K km  
(8.3 Earth radii)  
Energy imp = ~ 250  
KT

# Association of Space Explorers

**A Decision Program re  
NEO threats, submitted  
to the UN by the ASE  
and its international  
Panel on Asteroid  
Threat Mitigation**

**Presented to STSC in  
February 09 & full  
COPUOS in June 09.  
Being coordinated  
within COPUOS by  
Action Team-14**

Association  
of Space Explorers

## **ASTEROID THREATS** *A call for global response*

A proposal for  
an international  
decision-making  
program to protect  
our planet from  
Near Earth Object  
impacts.

Dealing with the  
Impact Hazard

Toward a Decision-  
Making Program for  
Asteroid Threats

Recommendations  
on a Decision-Making  
Program for a  
Global Response  
to Asteroid Threats

September 25, 2008

# Association of Space Explorers

## Members of the ASE Committee on Near Earth Objects

Rusty Schweickart, Chair  
Sergei Avdeev (Russia)  
Chris Hadfield (Canada)  
Thomas Jones (USA)  
Edward Lu (USA)  
Dumitru Prunariu (Romania)  
Viktor Savinykh (Russia)  
Franklin Chang-Diaz (USA/Costa Rica)

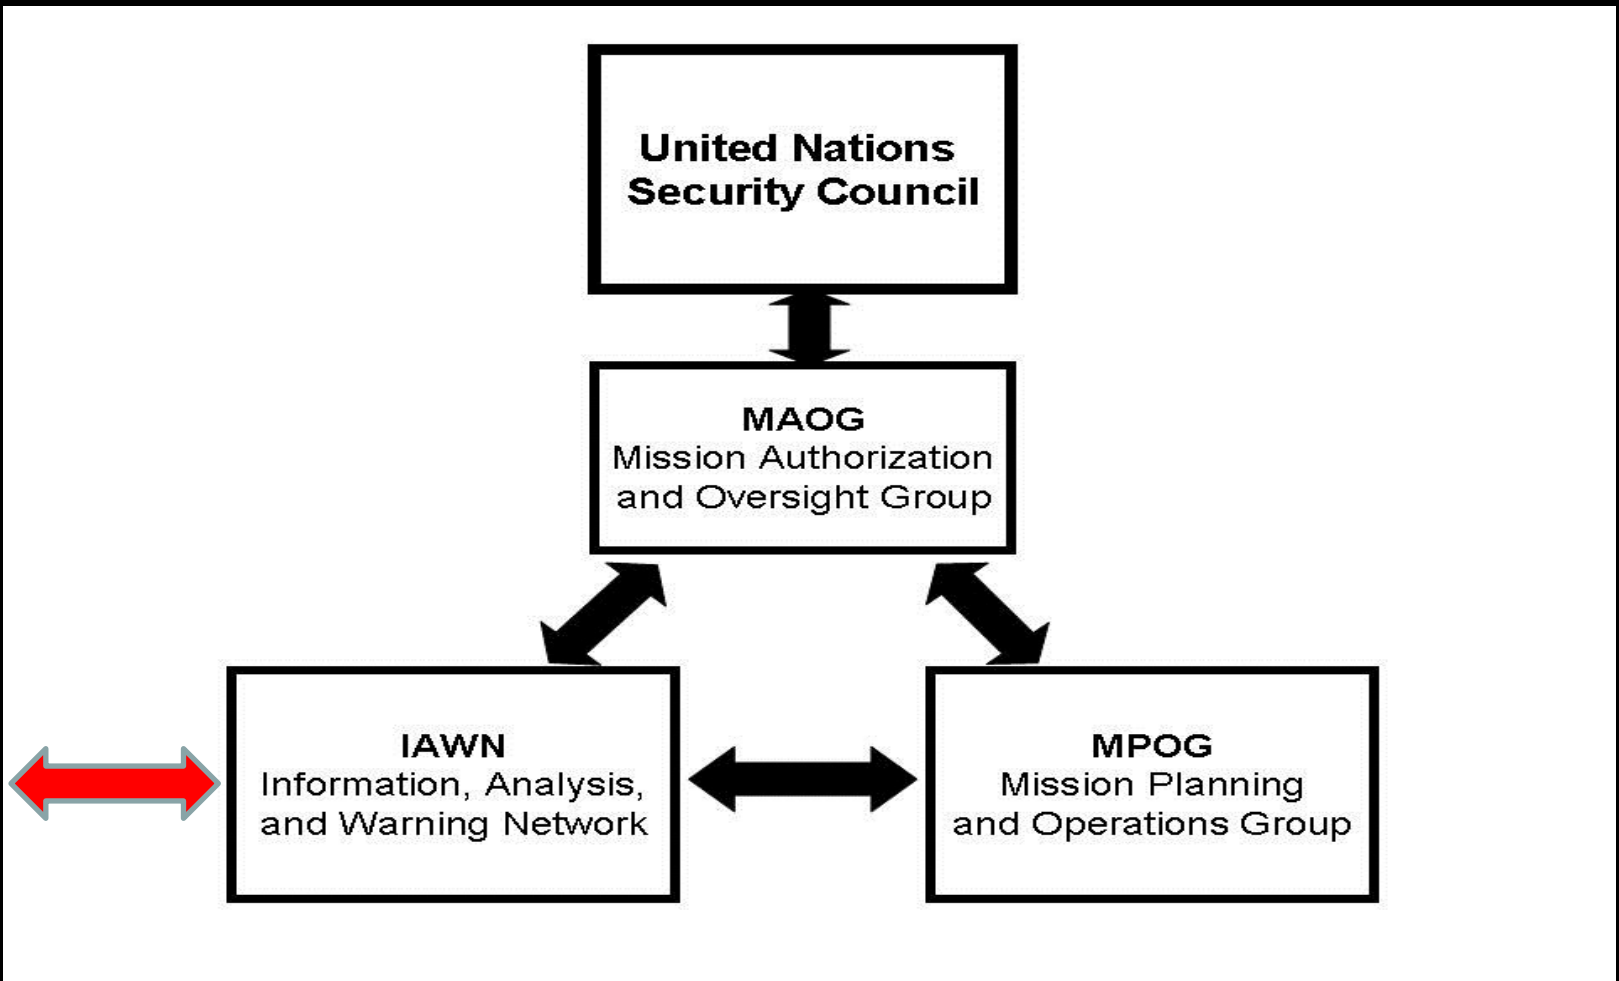

## Members of the Panel on Asteroid Threat Mitigation

Adigun Ade Abiodun, Nigeria  
Vallampadugai Arunachalam, India  
Roger-Maurice Bonnet, Switzerland  
Sergio Camacho-Lara, Mexico  
James George, Canada  
Tomifumi Godai, Japan  
Peter Jankowitsch, Austria  
Sergey Kapitza, Russia  
Paul Kovacs, Canada  
Walther Lichem, Austria  
Gordon McBean, Canada  
Lord Martin Rees, United Kingdom  
Karlene Roberts, United States  
Michael Simpson, United States  
Sir Crispin Tickell, United Kingdom  
Richard Tremayne-Smith, United Kingdom  
Frans von der Dunk, Netherlands  
James Zimmerman, United States

# Association of Space Explorers

## Key Recommendations Defined functional responsibilities

# Association of Space Explorers

## Agenda

- 1) Early Warning
- 2) Orbital Dynamics
- 3) Deflection Options

Association of Space Explorers

## **Early Warning**

- 1) NEO Inventory**
- 2) Statistical size-frequency distribution**
- 3) Future discovery rate**

# Association of Space Explorers

> 1,000,000  
Total by  
~2025

## Known Near-Earth Asteroids 1980-Jan through 2010-Jun

> 300,000  
Tunguska  
or larger

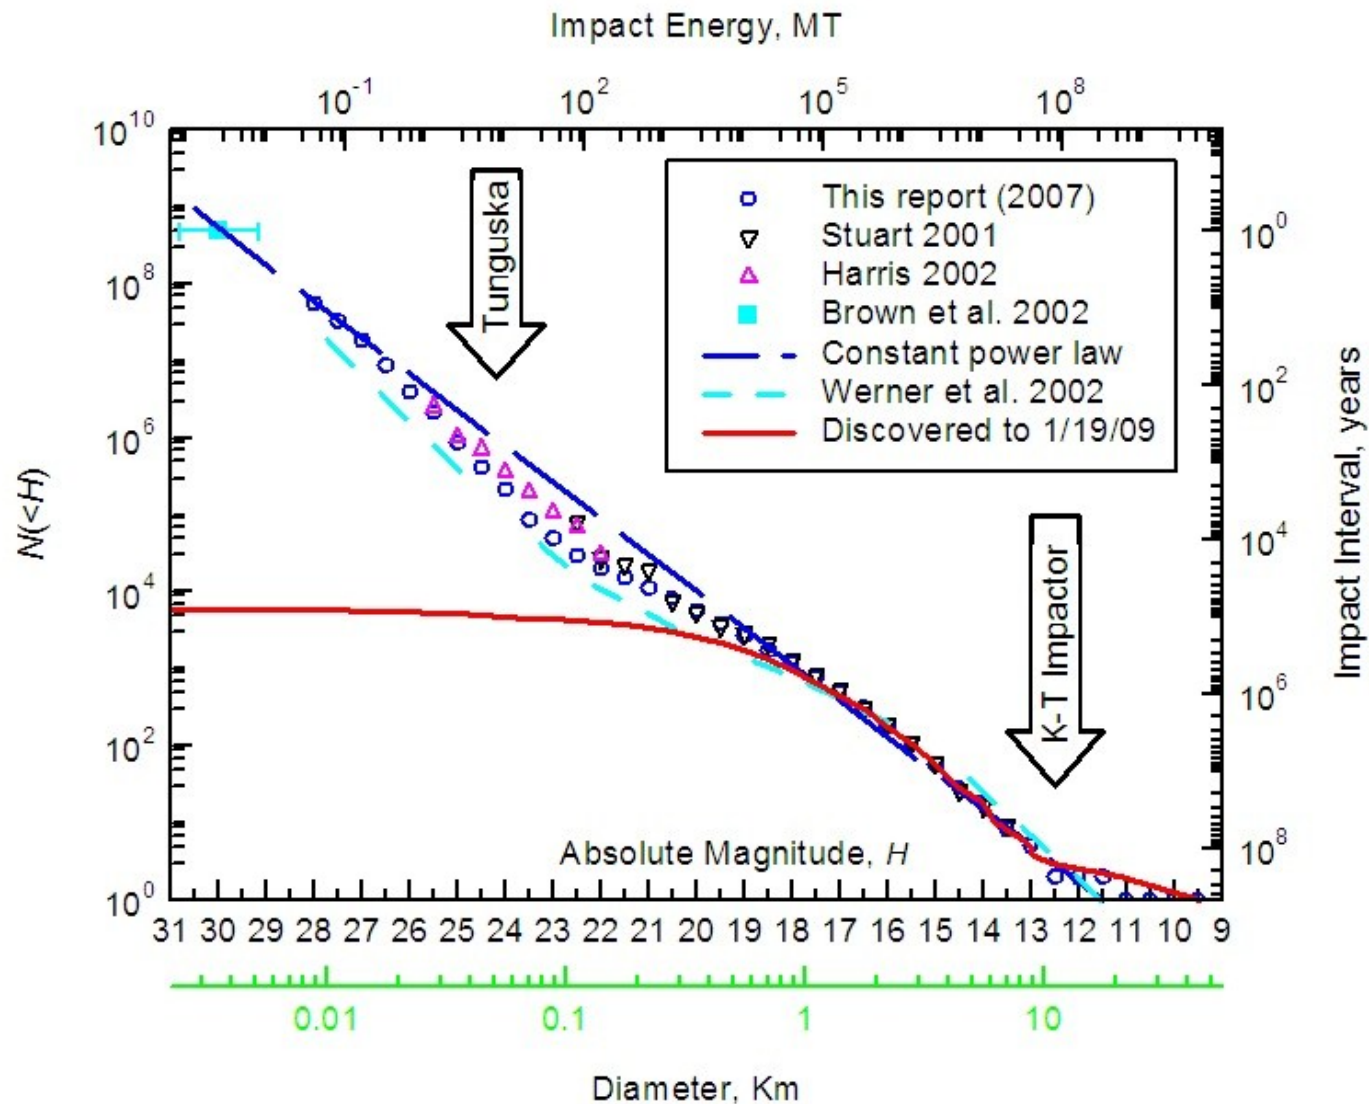

16 July 2010

Alan B. Chamberlin (JPL)

# Association of Space Explorers

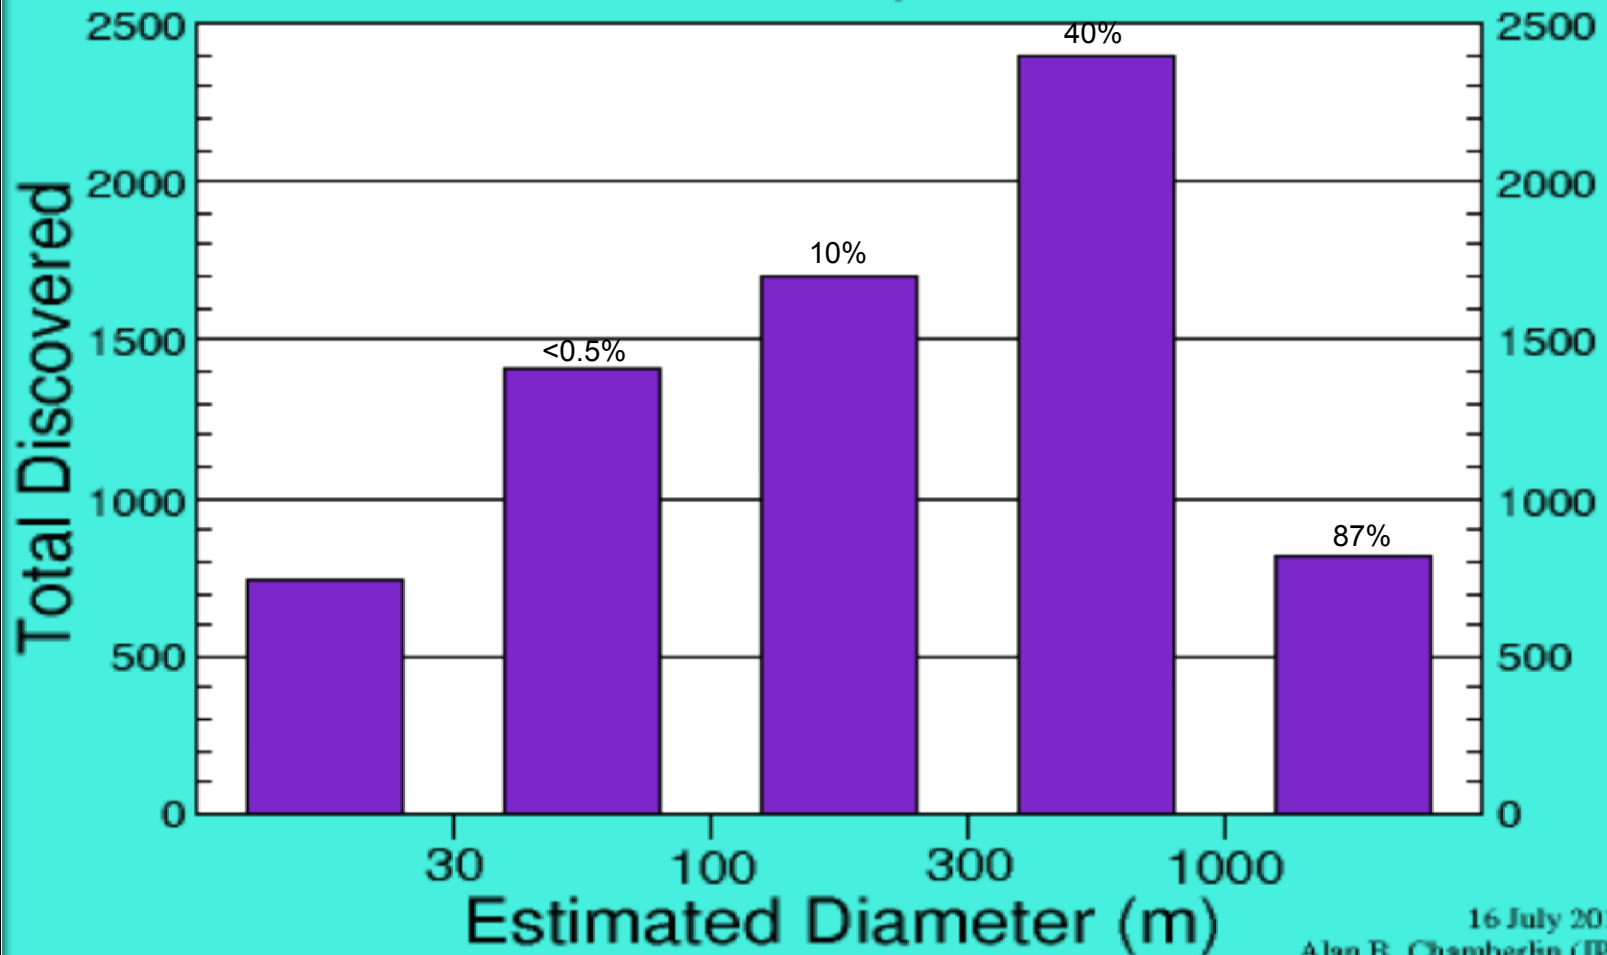

# Association of Space Explorers

## Near-Earth Asteroids

Total Discovered per Size Bin

# Association of Space Explorers

Thousands of objects that could take 10 to 20 years to see from Earth

# Association of Space Explorers

These results were computed on Oct 07, 2009

## 99942 Apophis (2004 MN4) Earth Impact Table

Date	Distance	Width	Sigma Impact	Sigma LOV	Stretch LOV	Impact Probability	Impact Energy	Palermo Scale	Torino Scale
YYYY-MM-DD.DD	(rEarth)	(rEarth)			(rEarth)		(MT)		
2036-04-13.37	0.53	< 1.e-04	0.000	-3.276	1.03e+03	4.3e-06	5.06e+02	-3.08	0

## Orbit Determination Parameters

# obs. used (total)	640
# delay obs. used	2
# Doppler obs. used	5
data-arc span	1395 days (3.82 yr)
first obs. used	2004-03-15
last obs. used	2008-01-09
planetary ephem.	DE405
SB-pert. ephem.	SB-BIG16-1
condition code	0
fit RMS	.48956
data source	ORB
producer	Steven R. Chesley
solution date	2009-Oct-23 11:54:34

## Additional Information

Earth MOID = 8.12667E-5 AU  
T<sub>jup</sub> = 6.467

Association of Space Explorers

## **Orbital Dynamics**

- 1) Geometry**
- 2) Line of Variations (LOV)**
- 3) Keyholes**
- 4) Risk corridor & implications**

# Association of Space Explorers

**MOID** – minimum orbit intersection distance  
**LOV** – line of variation

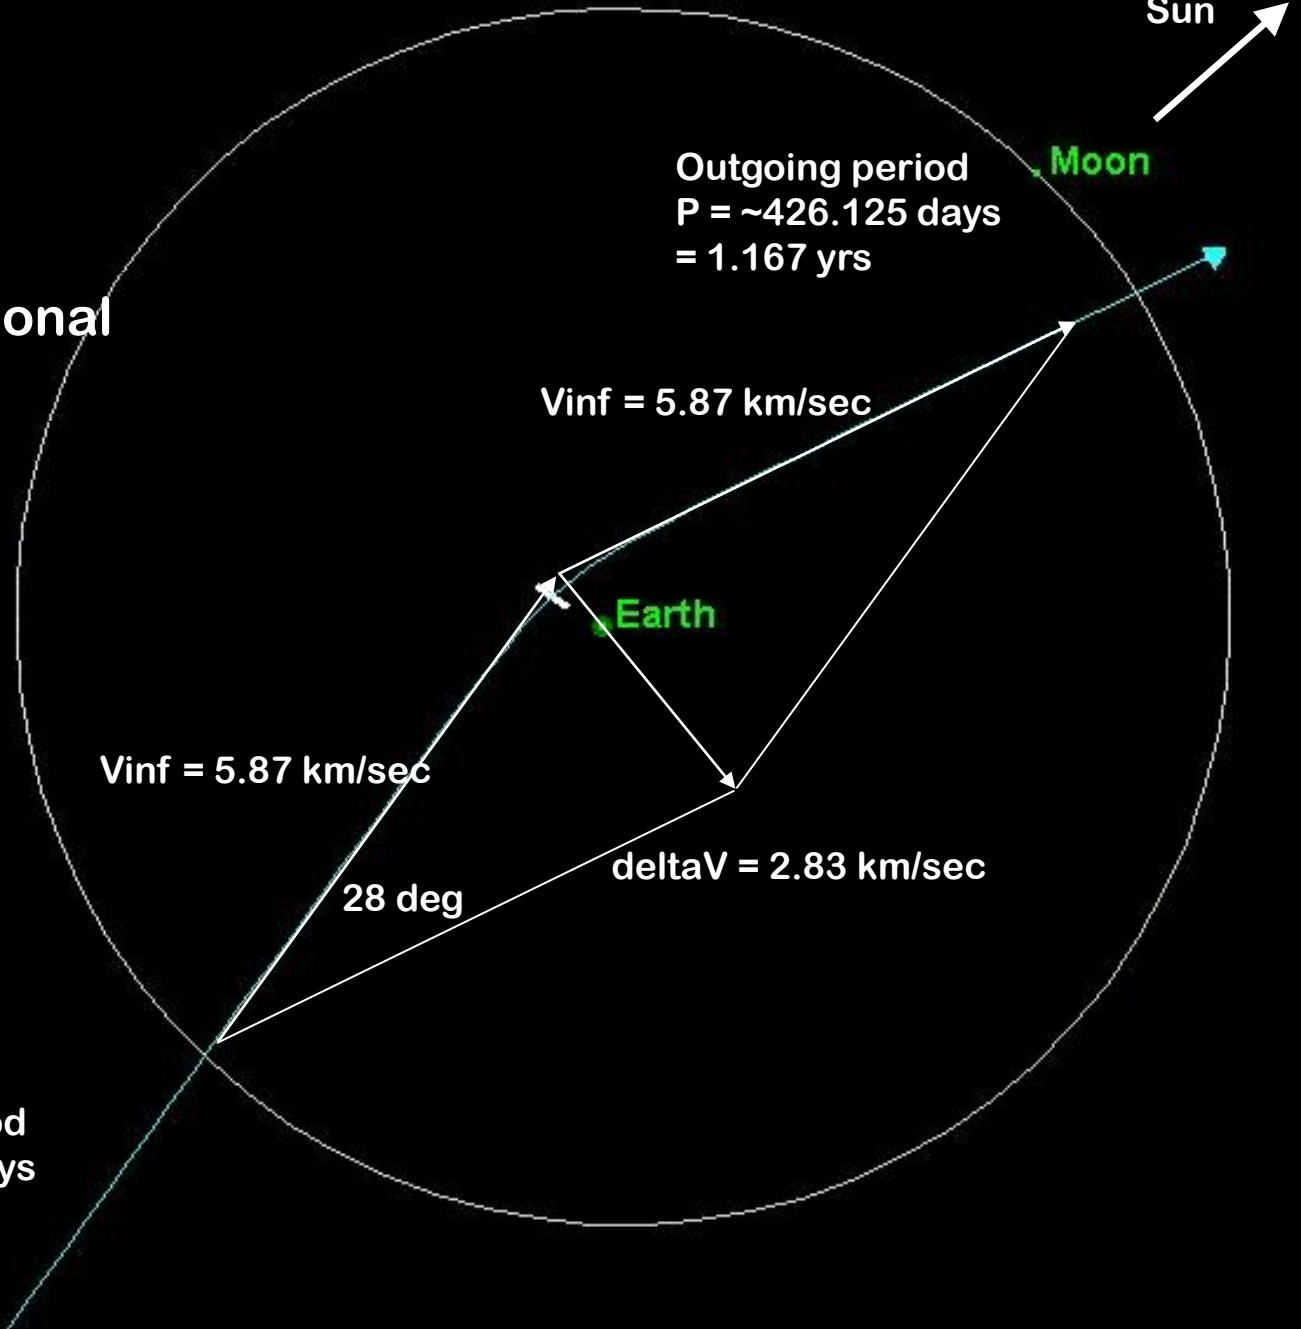

cge – close gravitational encounter

# Apophis

close encounter geometry

Friday, 13 April 2029  
~21:00 UT

Incoming period  
 $P = 323.588$  days  
 $= 0.886$  yrs

# Association of Space Explorers

## Resonances & Keyholes Early Apophis situation as example

Note: all calculations based on JPL data as of 4/11/05.

$$(426.125 \text{ days} - 3.4 \text{ minutes}) = \text{Period} = 426.12499 \text{ days}$$

# Association of Space Explorers

Total impulse required  
1.15e8 newton seconds  
10900 kilometers  
(5140 x 2.12)

Both strength AND  
precision are needed for  
a successful deflection  
campaign

Primary Deflection =  
Miss the Earth

Shepherding =  
Guide between keyholes

Total impulse required  
1e4 newton seconds  
0.6 kilometers

12,840 kilometers

# Association of Space Explorers

F Risk Corridor, Apophis, 13 Apr 2036 ?

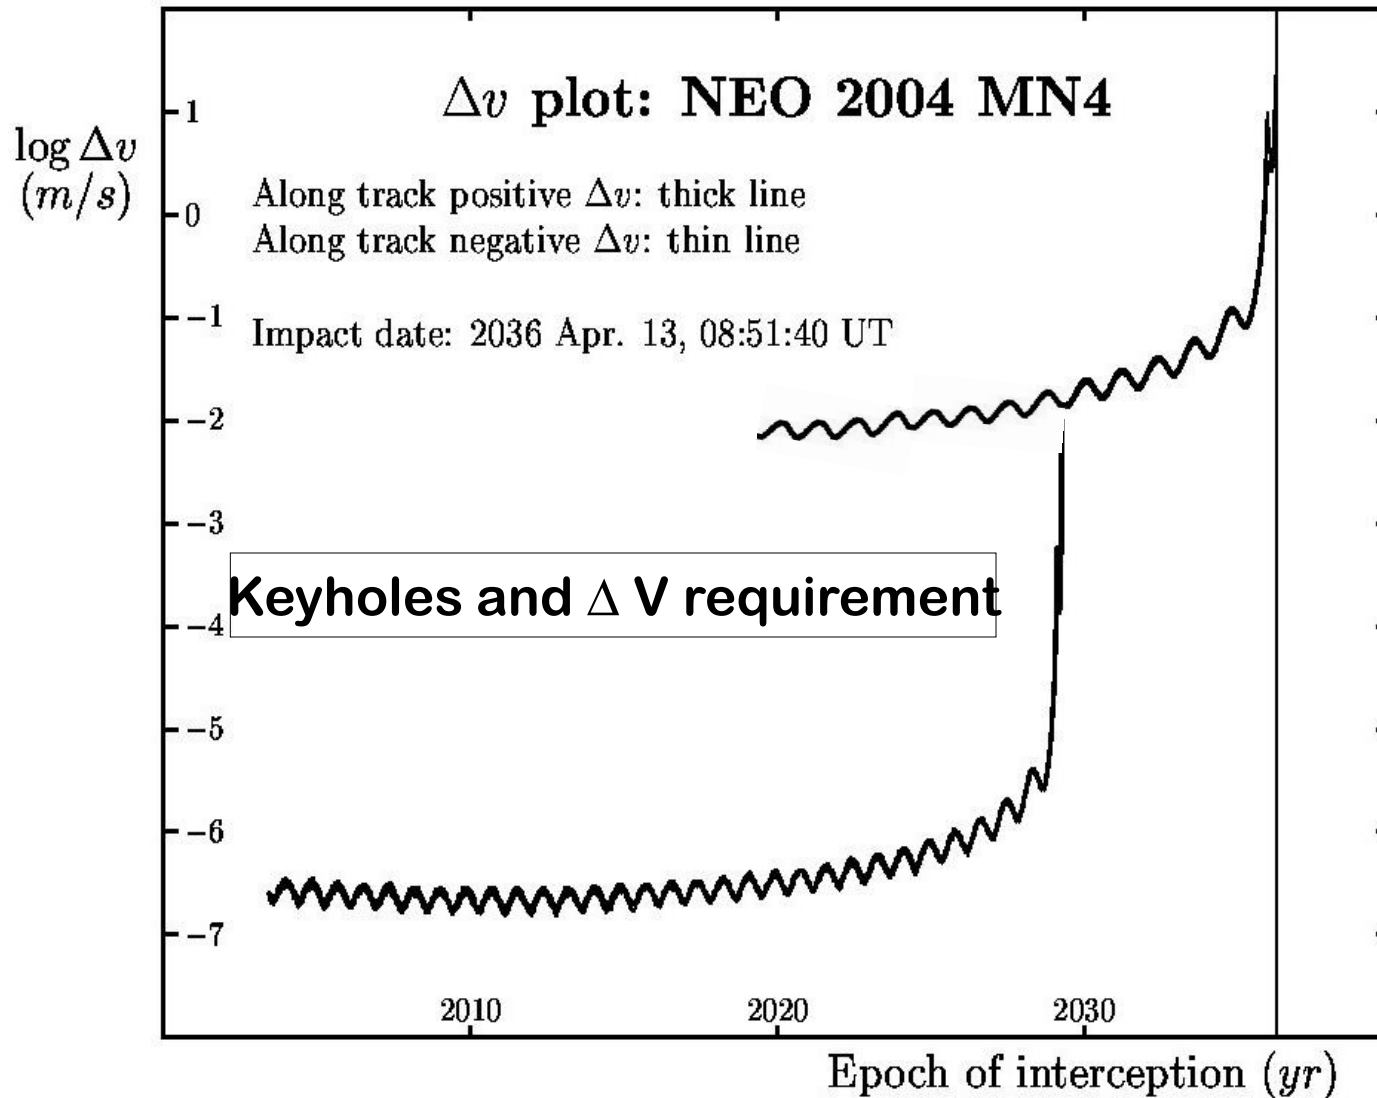

# Association of Space Explorers

## **Deflection Options (characteristics & capabilities)**

- 1)  $\Delta V$  required (1 Earth radius)**
- 2) Targetting (minimum miss?)**
- 3) Precision to avoid Keyholes**
- 4) Kinetic Impact & Nuclear**
- 5) Gravity tractor (or equivalent)**
- 6) Deflection Campaign**

# Association of Space Explorers

# Association of Space Explorers

## Current Deflection Capability

### Kinetic Impact

Pushes the asteroid via direct impact  
(KI = robust but imprecise)

### Gravity Tractor

Pulls the asteroid using mutual gravity as a tow-rope  
(GT = weak but precise)

# Association of Space Explorers

## Nuclear Explosion

Explodes surface off NEO  
to create impulsive push

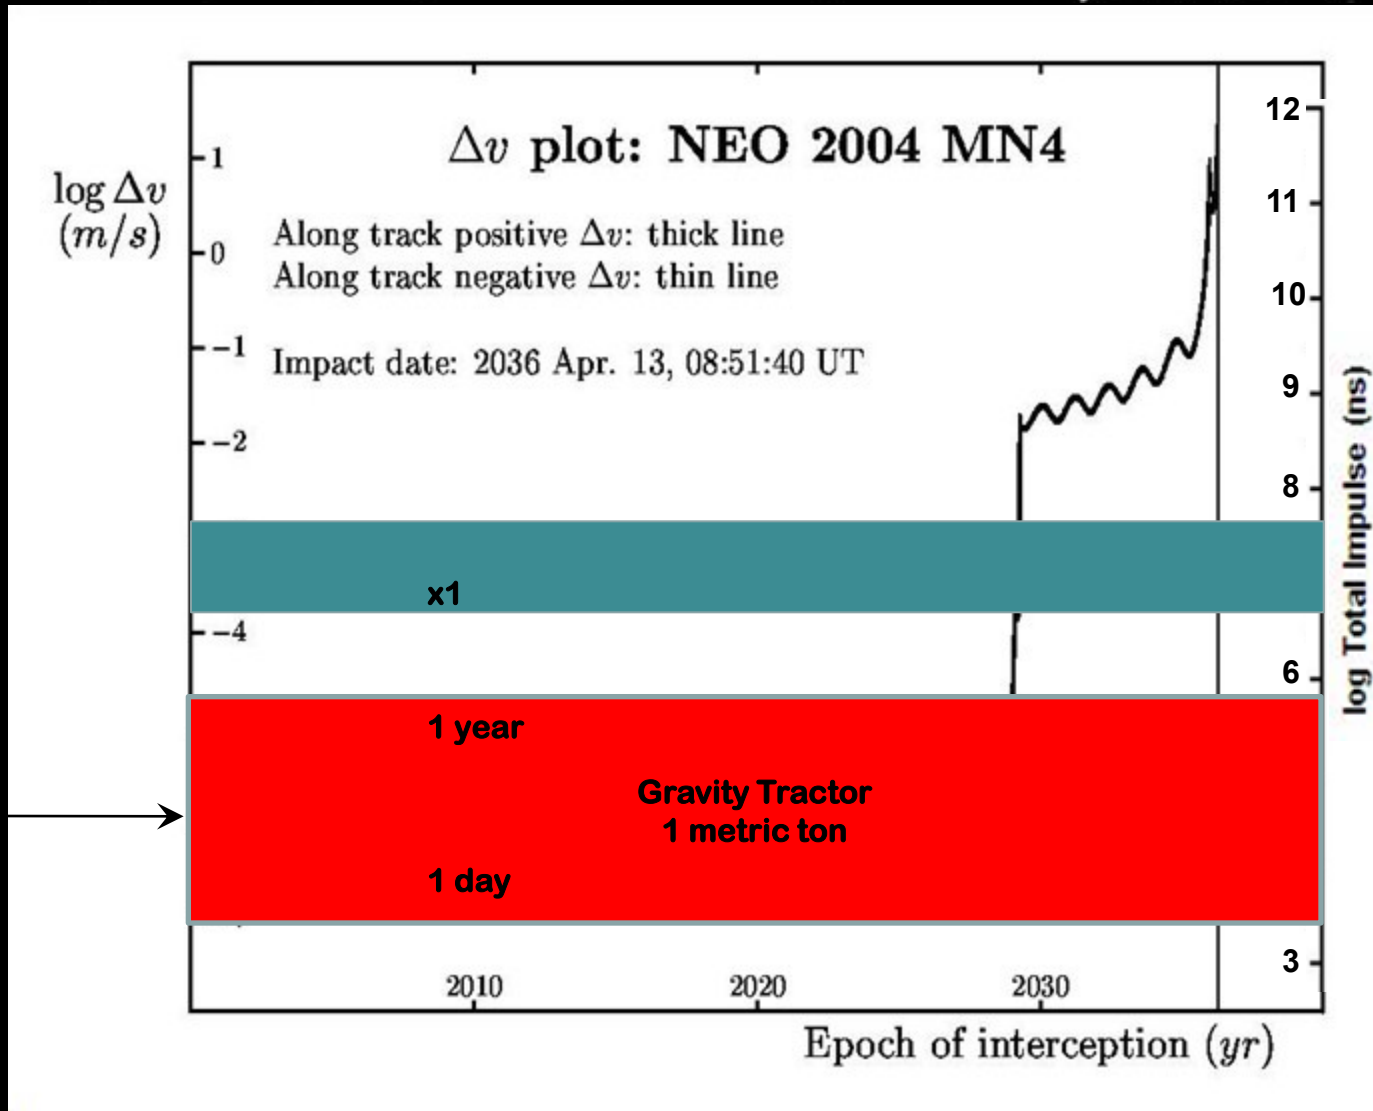

# Association of Space Explorers

## Keyholes and $\Delta V$ requirement

12.4 days  
@ 0.4n  
= 42,160 ns

# Association of Space Explorers

## Key Parameter

### – Total Impulse –

(= NEO momentum change)  
(Units = n-sec or kg-m/sec)

## Kinetic Impact\*

$$M\Delta V_{\text{NEO}} = \beta m V_{\text{IMP}}$$
$$\Delta V_{\text{NEO}} = \beta (m/M) V_{\text{IMP}}$$
$$2 < \beta < 10$$

## Gravity Tractor

$$F = GMm/r^2$$
$$\Delta V_{\text{NEO}} = tGm/r^2$$

Independent of M

\* Nuclear standoff explosion subject to different but comparable uncertainties.

# Association of Space Explorers

## Primary Deflection

Multiple keyholes  
within uncertainty  
zone

Earth orbital path

NEO orbital path

line of nodes

# Association of Space Explorers

## Secondary Deflection or Shepherding the NEO error ellipse

### Step 1

- collapse the primary deflection error ellipse

### Step 2

- shepherd the error ellipse between adjacent keyholes

Probability of success goal

1:1,000 -  $\sim 3\sigma$  error ellipse

1:1,000,000 -  $\sim 5\sigma$  error ellipse
